

CC884 CULTURAL CENTER REMOTE CONTROL

The **CC884 Cultural Center Remote Control** is a wall mountable unit intended for installation in the Cultural Center of LDS buildings which use the "automated audio system."

The **CC884** provides three microphone inputs, and two line inputs. There are three level controls corresponding to the mic and line inputs, an illuminated on/off button, and an illuminated remote/manual button.

The front cover of the unit is a hinged door with latch.

The back of the **CCP884** features two secure Euro-style, removable connectors where connections for all functions are made. The PC board adjacent to the connector clearly labels all of the connections with designations that conform to the mating mixer connections, or to the appropriate function.

The **CCP884** is designed for use with Ivie Technologies 884PW LDS or 884+ LDS mixers.
